

FRONTEND DEVELOPER TASK BRIEF

Position: Frontend Developer

Estimated Timeframe: 3-4 Days

Submission Format: GitHub Repository Link + Deployed Live Link

1. PROJECT OVERVIEW

Your task is to redesign and develop an animated, high-converting homepage for TIS (Tulas International School) - <https://tis.edu.in/>, We are looking to evaluate your modern frontend development skills, code structure, ability to build smooth animations, mobile responsiveness, and visual design intuition. You are required to retain the core branding and copy of TIS (Tulas International School) while elevating the entire page into a cutting-edge web experience.

2. TECH STACK REQUIREMENTS

- Core Framework: React.js, Next.js, or Vue.js
- Styling: Tailwind CSS, CSS Modules, or Styled Components
- Animations: Framer Motion, GSAP, or CSS Keyframes
- Deployment: Vercel, Netlify, or GitHub Pages

To stand out, incorporate at least TWO of the following features:

- Custom Cursor: Interactive mouse-follower ring or custom indicator that reacts to hoverable elements.
- Scroll-Triggered Reveals: Staggered entrance animations as cards and sections enter the viewport.
- Theme Switcher: Animated dark/light mode toggle.
- Scroll Progress Bar: Smooth top reading-progress indicator.

CODE REVIEW & EVALUATION CRITERIA

- Important Note on AI Tools: While using tools like ChatGPT, Claude, or Copilot is allowed for reference, unoptimized, messy, or unverified AI-generated code will lead to severe point deductions. You will be asked to walk through and explain your code structure during the technical review.
- Code Flaws & Architecture (30%): Clean component breakdown, no unused variables/dependencies, semantic HTML, effective hook usage, smooth frame rates.
- Animation & UX Quality (30%): Smooth motion, intuitive interactions, high aesthetic standards, full mobile/tablet responsiveness.
- Creativity & Design (20%): Modern agency look-and-feel, innovative UI.

- Well-structured code, clear README.md with setup instructions.

Please reply within 4 days of receipt with the following:

1. Public GitHub Repository Link: Including a clean README.md with instructions on how to run the project locally and deployed via Vercel, Netlify, or GitHub Pages.
2. Submit The form below :-
<https://forms.gle/1njGvsG8a2MW8cRR7>

Good luck! We look forward to reviewing your work.
